Lab - 5
Writeup
Configuring Web Server & DNS

- A Topology was created using a Switch, a server and a PC as shown below

| PC | — | Switch | — | Server |

10.0.0.2   10.0.0.1
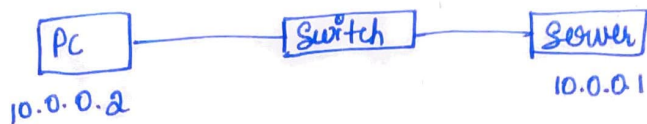

- HTTP services of the server was switched on

- DNS service of the server was configured with domain name & the address. Ex: name: arjun.com   address: 10.0.0.1

- Typing the defined url in the web browser of PC gives the required result.

Learning Outcomes:

* Creating a topology with Switch, Server & a PC.

* Using HTTP services.

* Configuring the web server.

* Configuring DNS services so that we can use the name instead of ip address.

* Using the name or the ip address in the web browser of PC gives the required result.
